

EOD

Expanded OD
Drill Pipe

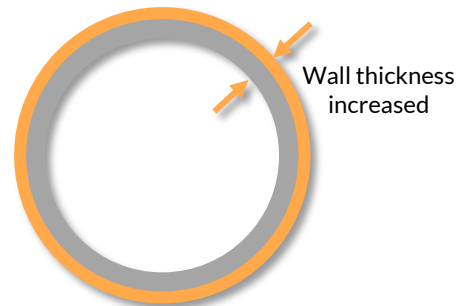

Complete Tubular Products(CTP) has designed and developed **EOD drill pipe** technology to **extend the life** of a drilling tubular when faced with even the **most abrasive slim-hole drilling conditions**.

The EOD tube body has been designed to **increase acceptable wear** limits resulting in an elimination of early downgrades due to low wall thickness.

The effect is a near **50% increase in drilling days** until pipe downgrades which provides a dramatically improved return on investment.

Traditional API Pipe

EOD Tube Body

EOD drill pipe has **the same ID** as standard API drill pipe, this ensures tool clearance and no additional pressure losses in pipe.

Transitioning to EOD drill pipe is made effortless by utilizing **standard API handling, testing, and well control equipment**.

The ability to **utilize existing handling equipment** provides the user the option of adding EOD drill pipe to existing drill strings.
